SUMMARY

Full Stack Software Engineer (Java/Scala, Spring Boot, React/TypeScript) with **5+ years of experience** building **real-time, high-traffic consumer** features end-to-end—from **low-latency APIs** and event-driven processing to modern UI experiences. Handled **peak ~2.3k RPS** while maintaining **~95ms P95 / ~100ms P99** latency and meeting strict SLOs; shipped **live polls and win-probability** experiences that improved **retention by 30%.** Known for performance-first engineering, clean ownership, and delivering cross-team features ahead of schedule.

SKILLS

Programming Languages: Java, Scala, JavaScript, Typescript
Backend: Spring Boot, Hibernate, Node.js
Frontend: React, Next.js, Redux, Tailwind CSS, HTML, CSS
Datastores: MySQL, PostgreSQL, MongoDB, Cassandra, Redis
Messaging/Streaming: Apache Kafka
Tools/DevOps: Git, GitHub, Bitbucket, GitLab, Jenkins, CircleCI, Docker, PCF, Consul, Nomad, Maven, Nexus, JFrog, SonarQube, ESLint, Postman, Swagger, JIRA, Confluence
Cloud: AWS (S3, Lambda, Code Artifact, Parameter Store)
Security/Protocols: OAuth2, JWT, JSON, Protobuf
Monitoring: Grafana

EXPERIENCE

Cricbuzz Platforms Limited — Aug 2024 – Present

Software Engineer — *Bangalore, Karnataka*

- Built a **real-time win probability system** by ingesting ball-by-ball events, persisting ball + over summaries for fast reads, and serving low-latency current + over-wise probability graph APIs, boosting app **retention by 30%.**
- Sustained peak traffic of **~2.3k RPS** with **~95ms P95 / ~100ms P99** latency, **0 5xx**, meeting a **300ms P95 SLO.**
- **Reduced API latency** from **~1s → ~100ms** by migrating legacy Scala services to Spring Boot microservices and optimizing database access with caching and query tuning.
- **Architected** and built the **Live Polls** platform for **Live Commentary & Match Info** pages (active/past lifecycle), delivering scalable vote + results APIs with cached low-latency reads.
- Designed **partner strip rotation logic** per with dynamic run time configuration, **enabling sponsor changes without app releases.**
- Led a **2-engineer delivery** by milestone planning, ownership split, and coordination with mobile/QA/stakeholders to **ship 2 weeks early**.
- Developed interactive **graph APIs** visualizing real-time match data, increasing **user engagemen**t by **25%**.
- Implemented **non-blocking I/O** and background task execution, and Redis/in-memory caching to **improve concurrency** and stability during high-traffic match windows.
- Designed MongoDB-backed APIs for **video** and **commentary snippets** with **geo-based filtering** and premium/free access segmentation.

NCSI Technologies Pvt Ltd — Mar 2022 – Aug 2024

Software Engineer — *Pune, Maharashtra*

- Developed **RESTful APIs** for the **banking** client, focusing on projects related to financial services using Spring Boot, React and Typescript.
- Implemented a backend service to **generate** and display **hierarchical** data in a table format, consisting of 4 columns where one column acts as the parent of another in the nested fashion, utilizing DSA for efficient data generation and hierarchical structuring.
- Developed a backend application to manage data that allows users to choose their preferred communication channels (SMS, Email, Push Notifications, etc.) for different transactions and marketing campaigns.
- Implemented **Multi factor authentication**, **role-based access**, and a **maker-checker** process ensuring creators cannot approve their items.
- Implemented **scheduler** for push notifications, optimizing real-time customer engagement for financial services.
- Migrated configuration properties from **PCF** managed server to a **custom spring cloud config server** with DB.
- Integrated **JWT** into applications, resulting in robust authentication and enhanced security.
- Ensured high **code quality** by writing unit test cases with coverage above **90%**.
-

- Engaged in all phases of Software Development Life Cycle **(SDLC)** using **Agile** Methodology and followed scrum sessions.

Infosys Ltd Nov 2020 – Mar 2022
Systems Engineer *Hyderabad, Telangana*

- Developed **REST APIs** for **telecom** client, leading to improved system performance and a better user experience.
- Managed customer enrollment and maintained data related to equipment, electrical lines, customers, and hubs in the telecommunications domain.
- Fixed over 50 bugs across multiple modules, ensuring optimal functionality and user experience.
- Optimized application performance, reducing load time by **30%** utilizing Spring Boot.
- Improved **Dashboard Management UI** by **20%** using ReactJs, enhancing user experience.
- Built an Order Management System **(OMS)** application as a training project, leveraging SpringBoot, ReactJs and MySQL.

PERSONAL PROJECTS

Blog App APIs *Spring Boot, React, MySQL, MongoDB*
GitHub: https://github.com/jkjitendra/Blog_App

- Developed comprehensive **RESTful APIs** with 30+ endpoints covering authentication, blog management, comments, reactions, categories.
- Implemented **JWT** authentication, **OAuth2** (Google/GitHub), and **RBAC** with 4 roles using Spring Security for secure API access.
- Built APIs with **Vault**-based secret management, **Bucket4j** rate-limiting, real-time comment/reaction endpoints with nested replies, and achieved **90%+ code** coverage with Junit and Mockito.

EduKitBox *React 19, Typescript, Indexed DB*
GitHub: https://github.com/jkjitendra/EduKitBox

- Developed offline-first PWA Web App for educational field sales teams.
- Implemented tablet-optimized UI featuring 6 kit categories, customer management, and order tracking.
- Built CSV export functionality with comprehensive order data, reducing order entry time by 40%.

PricePeek *JavaScript, Chrome APIs*
GitHub: https://github.com/jkjitendra/price_lookup

- Built Chrome Extension to track and notify users of lowest product prices across e-commerce websites.
- Implemented price-monitoring with background scripts and Chrome Storage API for price history tracking and notifications.

CERTIFICATION & AWARDS

- AZ-900 Microsoft Azure Fundamentals
- OCI Generative AI Certified Professional
- Awarded Top Scorer in the Secure Coding Tournament hosted by our valued client.
