SUMMARY

Full Stack Software Engineer (Java, Spring Boot, React, TypeScript) with **5+ years** of experience building **real-time, high-traffic consumer** features end-to-end—from **low-latency APIs** and event-driven processing to modern UI experiences. Handled **peak ~2.3k RPS** while maintaining **~95ms P95 / ~100ms P99** latency and meeting strict SLOs; shipped **live polls and win-probability** experiences that improved **retention by 30%**. Known for performance-first engineering, clean ownership, and delivering cross-team features ahead of schedule.

SKILLS

Programming Languages: Java, Scala, Go, JavaScript, Typescript

Backend: Spring Boot, Node.js, Golang Echo

Frontend: ReactJs, Next.js, Redux, Tailwind CSS, HTML, CSS

Datastores: MySQL, PostgreSQL, MongoDB, Cassandra, Redis

Messaging/Streaming: Apache Kafka

Tools/DevOps: Git, GitHub, Bitbucket, GitLab, Jenkins, CircleCI, Docker, PCF, Consul, Nomad, Maven, Nexus, JFrog, SonarQube, ESLint, Postman, Swagger, JIRA, Confluence

Cloud: AWS (S3, Lambda, Code Artifact, Parameter Store, RDS, DocDB)

Security/Protocols: OAuth2, JWT, JSON, Protobuf

Monitoring: Grafana, Prometheus

EXPERIENCE

Cricbuzz Platforms Limited

Bangalore, Karnataka

Team Lead

Jul 2026 – Present

- Lead a **4-member engineering team**, owning architecture, delivery planning, task allocation, technical reviews, and coordination across product, mobile, and QA stakeholders.
- Designed and implemented a **centralized logging framework** across services, standardizing structured logs, request-context propagation, and production diagnostics.
- Led the **technical design** and task planning for **revamping the Auction feature** in the Cricbuzz app, breaking the requirements into milestones and assigning work across the team.
- Designed the architecture and assigned delivery work for **Player Match Performance Stats**, enabling match-level and series-level performance views for every player.

Software Engineer

Aug 2024 – Jun 2026

- Built a **real-time win probability system** by ingesting ball-by-ball events, persisting ball + over summaries for fast reads, and serving low-latency current + over-wise probability graph APIs, boosting app **retention by 30%**.
- Sustained peak traffic of **~2.3k RPS** with **~95ms P95 / ~100ms P99** latency, **0 5xx**, meeting a **300ms P95 SLO**.
- Reduced API latency** from **~1s** → **~100ms** by migrating legacy Scala services to Spring Boot microservices and optimizing database access with caching and query tuning.
- Architected** and built the **Live Polls** platform for **Live Commentary & Match Info** pages (active/past lifecycle), delivering scalable vote + results APIs with cached low-latency reads.
- Designed **partner strip rotation logic** per with dynamic run time configuration, **enabling sponsor changes without app releases**.
- Led a **2-engineer delivery** by milestone planning, ownership split, and coordination with mobile/QA/stakeholders to **ship 2 weeks early**.
- Developed interactive **graph APIs** visualizing real-time match data, increasing **user engagement by 25%**.
- Implemented **non-blocking I/O** and background task execution, and Redis/in-memory caching to **improve concurrency** and stability during high-traffic match windows.
- Designed MongoDB-backed APIs for **video** and **commentary snippets** with **geo-based filtering** and premium/free access segmentation.

NCSI Technologies Pvt Ltd

Pune, Maharashtra

Software Engineer

Mar 2024 – Aug 2024

- Developed **RESTful APIs** for the **banking** client, focusing on projects related to financial services using Spring Boot, React and Typescript.
- Implemented a backend service to **generate** and display **hierarchical** data in a table format, consisting of 4 columns where one column acts as the parent of another in the nested fashion, utilizing DSA for efficient data generation and hierarchical structuring.
- Developed a backend application to manage data that allows users to choose their preferred

communication channels (SMS, Email, Push Notifications, etc.) for different transactions and marketing campaigns.

- Implemented **Multi factor authentication**, **role-based access**, and a **maker-checker** process ensuring creators cannot approve their items.
- Implemented **scheduler** for push notifications, optimizing real-time customer engagement for financial services.
- Migrated configuration properties from **PCF** managed server to a **custom spring cloud config server** with DB.
- Integrated **JWT** into applications, resulting in robust authentication and enhanced security.
- Ensured high **code quality** by writing unit test cases with coverage above **90%**.
- Engaged in all phases of Software Development Life Cycle (**SDLC**) using **Agile** Methodology and followed scrum sessions.

Infosys Ltd Systems Engineer

Hyderabad, Telangana

Nov 2020 – Mar 2022

- Developed **REST APIs** for **telecom** client, leading to improved system performance and a better user experience.
- Managed customer enrollment and maintained data related to equipment, electrical lines, customers, and hubs in the telecommunications domain.
- Fixed over 50 bugs across multiple modules, ensuring optimal functionality and user experience.
- Optimized application performance, reducing load time by **30%** utilizing Spring Boot.
- Improved **Dashboard Management UI** by **20%** using ReactJs, enhancing user experience.
- Built an Order Management System (**OMS**) application as a training project, leveraging SpringBoot, ReactJs and MySQL.

PERSONAL PROJECTS

Blog App APIs

Spring Boot, React, MySQL, MongoDB

GitHub: https://github.com/jkjitendra/Blog_App

- Developed comprehensive **RESTful APIs** with 30+ endpoints covering authentication, blog management, comments, reactions, categories.
- Implemented **JWT** authentication, **OAuth2** (Google/GitHub), and **RBAC** with 4 roles using Spring Security for secure API access.
- Built APIs with **Vault**-based secret management, **Bucket4j** rate-limiting, real-time comment/reaction endpoints with nested replies, and achieved **90%+ code** coverage with Junit and Mockito.

EduKitBox

React 19, Typescript, Indexed DB

GitHub: <https://github.com/jkjitendra/EduKitBox>

- Developed offline-first PWA Web App for educational field sales teams.
- Implemented tablet-optimized UI featuring 6 kit categories, customer management, and order tracking.
- Built CSV export functionality with comprehensive order data, reducing order entry time by 40%.

CodeBundle

Electron, React, TypeScript, Python, Node.js

GitHub: <https://github.com/jkjitendra/codebundle>

- Built a cross-platform developer tool that scans projects and exports selected source files into structured, AI-ready Markdown or text, with custom exclusions, previews, token estimation, and saved profiles.
- Developed an Electron desktop app, Python CLI, and VS Code extension with secure local processing, secret scanning, Git-based diff exports, automated tests, and multi-platform packaging.

CERTIFICATION & AWARDS

- AZ-900 Microsoft Azure Fundamentals
- OCI Generative AI Certified Professional
- Awarded Top Scorer in the Secure Coding Tournament hosted by our valued client.
